

EDI Multi-year Comparisons

The EDI ratings for the domains of Physical Health and Well-being and Communication and General Knowledge were revised for the 2004/2005 EDI implementation. The revised domains were found to be a more accurate way of rating children's abilities based on theoretical analyses.

It should be noted that multi-year comparisons presented in this report reflect a comparison between the revised EDI and the previous version of the EDI; however, further analyses will be released once the previous version has been recoded to be consistent with the 2004/2005 revised version of the EDI.
